## NOTES

1. The maximum temperature can not exceed the specified value While product work.
2. The highest working environment temperature of product is variable, the cooling conditions and the actual use of power changes will affect the product's maximum working temperature.
3. This series of high power density products, more heat dissipation, cooling area is limited; In high-temperature environment & full-Load, it is recommended to use auxiliary cooling measures (plus radiator, paste the metal box wall, etc.) to ensure that The temperature of the product substrate does not exceed the specified value.
