*1 AUX output power is not included.
*2 The current flowing through the neutral line increases when AC input voltage is over AC456V 3φ 4-Wire. The flowing current will vary according to the input voltage and the load current. The maximum flowing current will be 18A.
*3 The current of input surge to a built-in noise filter (0.2ms or less) is excluded.
*4 Measured by 500MHz oscilloscope.
Ripple and ripple noise is measured on measuring board with capacitor of 22μF within 150mm from the output terminal.
*5 Drift is the change in DC output for an eight hour period after a half-hour warm-up at 25℃, with the input voltage held constant at the rated input/output.
*6 Can't be used above the rated output current and the rated output power.
*7 When the output voltage is adjusted to higher than 49.92V and the load factor is over 70% of the rated current, if the load current changes quickly (< 200msec), the output voltage drops approximately 5V below the setting voltage.
*8 When the output voltage is adjusted to higher than 149.82V and the load factor is over 70% of the rated current, if the load current changes quickly (<200msec), the output voltage drops approximately 15V below the setting voltage.
*9 Output voltage recovers from protection by shutting down the input voltage and waiting more than 10 seconds then turning on AC input again, or turning off the output voltage by remote control.
*10 Please contact us about another class.
*11 Case size contains neither the terminal blocks, connector and screw.
* To meet the specifications, do not operate over-loaded condition.
* A sound may occur from power supply at peak loading.

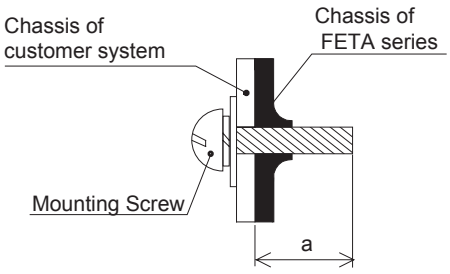
Assembling and Installation Method

Installation Method

■Screw mounting requires considering the product weight for safety fixtures.

■To keep enough insulation distance between screws and internal components, length of the mounting screw should not exceed recommendation as shown in right figure.



Model	Mounting hole	a (Max penetration length)
FETA2500BA, 3000BA	Bottom	6mm max
	Side	4.5mm max
FETA7000T, 7000ST	Side	15mm max

■The power supplies have a built-in forced cooling fan. Do notblock ventilation at the suction side and its opposite side.

* Reverse airflow option (-F2) is available for FETA2500BA. Refer to Instruction manual.

■If you use a power supply in a dusty environment, it can cause a failure. Please consider taking such countermeasures as installing an air filter near the suction area of the system to prevent a failure.

■When mounting the power supply with screws, it is recommended that this be done as shown below.
If other methods are used, be sure the weight of the power supply is taken into account.
